Idea

The app gives user the ability to peek and view the events happening around them. Users have the option to upload pictures based on their current location, which is then available to be viewed on a public feed.

Key Features

- Facebook Login
- Asynchronous loading/storing of images based on users' location
- Parse for storing information
- Applying filters to images
- Image Pickers for capturing images

Frameworks

- GCD
- Background Tasks
- Filters
- Core Location
- Image Pickers
- Parse SDK
- Facebook SDK

Target Audience

The audience covers people of all genders and age. Further, people who like to click pictures or know as to what is happening around them will develop a liking to the app even more.
